Course Content / Description
The evolution of modern economic ideas reflects the changing historical dynamics of capitalism and follows certain
topics of intellectual development. Both the modern neoclassical economics and political economy find their
intellectual origins in the classical political economy. Successive generations of economists have debated over the
origins of value/surplus value, the underlying determinants of prices, and the inherent stability/instability of the
capitalist system. Fundamentally, the debates raise the questions whether capitalism is an economically and socially
rational system and whether there are historically viable alternatives to the existing economic system.

Course Objectives
1. This is the first half of a year-long course on history of economic doctrines. This part of the course focuses
   on classical political economy from the 18th to the 19th century as well as some further developments in
   the 20th century that were related to the classical economic ideas.
2. There are two common themes throughout the course: the origin of value/surplus value (and the
determination of relative prices); and the stability/rationality of the capitalist economic system.
3. Historical economic ideas will be related to contemporary economic theories and economic realities. This
   helps to enhance the students’ theoretical understanding as well as their ability to analyze real world
economic problems.

Textbook:
Karl Marx, Capital, volume 1, 2, and 3 (International Publishers, 1970 edition, on library reserve).

Course Requirements and Grading:
Attendance: 10%
Presentation: 10%
Midterm Exam: 30%
Final Exam: 30%
Term Paper: 20%

Presentation
Each student is required to read and present in class on one of the following readings:

V. I. Lenin, Imperialism: the Highest Stage of Capitalism (Pluto Press, 1996; free online version available)
Donella H. Meadows, et al., Limits to Growth: the 30-Year Update (Chelsea Green, 2004)

Term Paper
Each student is required to complete a term paper on the works of a political economist who was of intellectual and
historical significance from the 18th to the 20th century. The paper may be on the same subject as the student’s
presentation.

The paper should be 10-15 pages, double spaced (for graduate student, no less than 10 pages). In the paper,
the student should summarize the political economist’s basic ideas, evaluate the ideas’ intellectual strength or
weakness, compare the political economist to other political economists when relevant, and comment on their
relevance for our understanding of today’s economy.
